**GUIDE FOR USERS**

---

The life-time of the sunglasses you purchased will be optimal by observing the recommendation below. It is important, to use, store and clean your sunglasses exactly as written in the guide, in order to have them serve your comfort for a long time.

---

## **USE**

You should always put your sunglasses on or off using both hands and holding it by the temples. Ideally the frame is resting on your nose, the two temples on your ears. Wearing the sunglasses on the top of the head will weaken the quality and can cause damage in both the frame and lenses.

---

## **STORAGE**

Glasses should always be in their case, if not in use. If you get into a situation where this is not possible, store them folded with lenses upward, on a flat surface. You should never store your glasses without protection in your pockets, bag, or hanging at the neckline of your garment. I would not recommend exposing your sunglasses to extreme weather conditions, for example: leaving it on the overheated control panel of a car (over 45°C), taking it with you to sauna, solarium etc. You should protect it from every kind of chemicals, salt water, heat emission, and strong physical or mechanical impacts.

---

## **CLEANING**

Clean the lenses with the soft case included in the package, always dry. You should regard the microfiber case as an accessory of the lenses, since its material, specially developed for this purpose, is sparing the surface while cleaning, at the same time removing grease and dust, thus keeping up the quality of the lenses. I would recommend cleaning the frame with damp cotton material, without applying any chemicals (detergent etc.).

---

## **WARRANTY**

As a manufacturer, we provide lifetime warranty on our product, for parts made by us: frame, temple, nose pad-consoles. The warrant is valid for any kind of manufacturing or quality defects, but not for defects caused by improper use. To decide upon complaints we claim the possibility of inspecting the product. For this we ask you to send the glasses back in their original package. In case the defect's cause can be traced back to inadequate manufacturing, we replace the item at our own expense. In case the defect is caused by improper use, we cannot offer the warranty option.

---

## **LENS**

Our lenses are the products of the world's leading lens manufacturer, Essilor, which filtering out 100% of UVA and UVB. The lenses belongs to stage 3 filter category. The producer recommends them for strong sunlight or driving (except at night). Light transmittance: between 8 and 18 percent. Our sun lenses took the dropball test and aced it. The lenses are scratch resistant with an anti-reflex coating. Its refractive index is 1.6. The optical demo lenses are not suitable for wearing, they provide help for eye examinations.

---

## **STANDARD**

The bringing standard relating to the product is: MSZ EN 1836:2005 + A1:2008  
The frames have CE notation.
